Human colon cancer Human ovarian anti Novel human diagno Human polypeptide Staptinococus epi Chlamydia pneumoni S. epidermidis ope Staphylococus epi Propionibacterium Arabidopsis thalia	ALIGNMENTS				pallidum protein.	gen; membrane antigen; syphilis.								anti-Treponema pallidum antibodies, used for diagnosis g a fusion protein of membrane antigen with peptide n be biotinylated in vivo	н.	The present sequence represents a Treponema pallidum protein, which is used to produce a fusion protein antigen for use in the method of aftereting antibodies against Treponema pallidum. The antibodies are detected in a sample by reaction with a fusion protein antigen, present in the mixture in Inhalting concentration. The fusion protein antigen comprises a Treponema pallidum membrane antigen. The method is used for diagnosis of syphilis.

(05pC) Drail fragment amino acid sequence. The polypeptide contains an immunological epitope used in the invention. Large amounts of Ospc are infected ticks to mammalian hosts. The Ospc protein sequence is used to dispose B. Dorrelian hosts. The Ospc protein sequence is used to dispose B. Dorrelia infection in mammals. The Ospc nuclectide sequence is used to prevent (via vaccination), treat or detect Borrelia (sepecially B. burgdorferi) infections, i.e. Lyme disease, in mammals including humans. The Ospc nuclectides a superior classostic antigen that detects early Lyme disease infection, predicts successful eradication or the organism from the host, and discriminates between individuals with Lyme disease and individuals who have been vaccinated with an Osph Lyme disease vaccination. Detection of anti-Ospc correliacidal antibodies advantageously gives an early diagnosis which anti-Ospc borreliacidal antibodies advantageously gives an early diagnosis which anti-Ospa muth Ospa, vaccination with Ospc results in clearance of spirochetes and resolution of symptoms even if administered after

                                                                                                                                                                        The sequences given in AAW11872-86 represent Hantavirus nuclear proteins. The N-terminal regions of these proteins may be used antigens to raise anti-hantavirus monocional antibodies. These antibodies are useful in diagnosis of hantavirus infection due their specificity to Hantavirus.
                                                                                                                                                                                                                                                                                                                  (ATAT-)

The protein is used in the method of the invention. The specification describes a method for detecting antibodies against Treponema pallidum. The antibodies are detected in a sample by reaction with a fusion protein antigen, present in the mixture in limiting concentration. The fusion protein antigen comprises a freedem pallidum membrane antigen. The method is used for diagnosi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 e present sequence represents a Treponema pallidum membrane protein tigen, which is used to produce a fusion protein antigen for use the method of the invention. The specification describes a method of detecting antibodies against Treponema pallidum. The antibodies e detected in a sample by reaction with a fusion protein antigen,

In the hybrid, a polypeptide of interest is fused the C-terminus of the avidin-binding polypeptide. The hybrid polypeptide can then be recovered in a single chromatographic stusing avidin monomer affinity chromatography.

The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptides. The proteins and their associated DNA sequences the treatment, prevention and diagnosis of medical conditions P. acnes. The disorders include SAPHO syndrome (synovitis, acr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41233-7) and P. abyssi proteins. P. abyssi a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up 110 degrees centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 7; Page 1349; 1657pp; French.

The novel proteins retain at least 30% isocitrate ligase activit after heating at 500C for 5 minutes. DNA fragments encoding the enzymes were isolated from a Corynebacterium thermoaminogenes chromosomal DNA plasmid library by PCR. The DNA may be used for developing strains of amino acid producing microorganisms.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC AAU03119-AAU03149 represent novel Streptococcus pyogenes virulence
CC proteins #1-31. The S. pyogenes virulence genes can be used to
CC produce attenuated microorganisms comprising a mutation that disrupt
CC the expression of the virulence protein. The virulence genes, proteins
CC or an attenuated microorganism are useful for therapeutic or diagnostic
CC purposes. DNA encoding the virulence proteins, the proteins themselves,
CC an attenuated microorganism or a vaccine comprising the virulence
CC protein are useful for the manufacture of a medicament for use in
CC the treatment or prevention of a condition associated with infection
CC by Streptococcal or Gram positive bacteria, for veterinary treatment,
CC and in a screening assay for the identification of an antimicrobial
CC drug. Discorders which can be treated using S. pyogenes virulence
CC polynucleotide and polypeptide sequences include non-invasive infections
CC and invasive infections e.g. impetigo, pharyngitis, necrotising
CC fascilitis, bacteraemia, streptococcal toxic shock syndrome (STSS),
CC pneumonia and rheumatic fever. The virulence proteins are also useful
CC in the preparation of antihodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                    The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nakagawa

                                                                                                                                                                                                                                                                                                                                                 construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation.

AAF68082 and AAF68082 represent sequencing primers which are used in an area of the form of the following contents of the following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation -
                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                 example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2001-071486/08.

                                                                                       intervals, (c) PP induces an in vitro response, or in vitro recall response, determined by release of IFN-gamma of at least 1000 pg/ml or 500 pg/ml, respectively, from Peripheral Blood Mononuclear Cells (PBMC) withdrawn from TB patients, or PPD positive individuals, 6 months after diagnosis, (d) PP induces a specific antibody response in a TB patient, as determined by enzyme linked immunosorbent assay (ELISA) technique or a western blot, (e) PP induces a positive delayed type hypersensitivity (DTH) response, determined by intradermal injection. (I) and (II) are useful in preparing a prophylactic or therapeutic medicine as a vaccine for induction of a protective or generation of an immune response in a mammal against infection with a virulent Mycobacterium. (I) and (II) are also useful as diagnostic reagent for the diagnosis of a virulent mycobacterium infection. The vaccine of the invention induces efficient mycobacterium infection.
                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel polypeptide (PP) of somatic proteins extract (I) which have tuberculostatic activity. (I) or their subsequence has at least one of the following properties: (a) the PP induces an in vitro recall response, or an in vitro response, during primary infection with virulent Mycobacterium, determined by a release of interferon (IFN) gamma, (b) PP induces a protective immunity, determined by vaccinating an animal with PP and an adjuvant, three times at two weeks vaccinating an animal with PP and an adjuvant, three times at two weeks
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tuberculosis; TB; antigen; vaccine; diagnosis; somatic; tuberculostatic; infection; interferon-gamma; IFN-gamma; protective immunity; therapy; delayed type hypersensitivity response; TB64.
                               immunological memory, providing long term protection against TB. sequence represents a Microbacterium tuberculosis TB64 antigen described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 100-101; 126pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
pyruvate carboxylase enzyme. The invention is useful for producing an amino acid (e.g. L-Lys, L-Thr, L-Met, L-Ile, L-Glu, L-Arg and L-Pro), by culturing a host cell in a suitable media and separating the amino replacement of a wild-type pyruvate carboxylase gene, with a feedback resistant pyruvate carboxylase gene, in a Corynebacterium glutamicum, replacing a genomic copy of the wild-type pyruvate carboxylase gene wild-type pyruvate carboxylase yellow wild-type pyruvate carboxylase gene wild-type pyruvate carboxylase yellow wild-type pyruvate carboxylase yellow wild-type pyruvate carboxylase yellow wild-type yellow wild-type yellow wi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Feedback-resistant;
aspartic acid feedba
                                                                                                                                                                                                            Claim 17;
                                                                                                                                                                                                                                                            Novel mutated, feedback resistant pyruvate carboxylase enzyme polypeptide, useful for producing amino acids e.g. L-lysine, L-threonine, L-glycine, L-glutamic acid, L-proline and L-methionine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Corynebacterium

provided in a specification relating

present sequence is

Proteins

and

their DNA useful

for microbial

production

of L-amino

acids

encoding thermophilic amino acid biosynthesis system enzymes of the thermotolerant bacterium Corynebacterium thermoaminogenes. The novel proteins retain at least 30% isocitrate ligase activit after heating at 500c for 5 minutes. DNA fragments encoding the enzymes were isolated from a Corynebacterium thermoaminogenes chromosomal DNA plasmid library by PCR. The DNA may be used for

activity

of t

genes

developing strains of amino acid

producing

microorganisms

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         recombination strain, and replacing the selectable marker gene in the first recombinant strain, with feedback resistant pyruvate carboxylase gene through homologous recombination to form a second recombinant strain, where the homologous recombination in the above steps, occurs between the host cell and the vector. The feedback-resistant pyruvate carboxylase enzyme is resistant to feedback inhibition from aspartic acid. The present amino acid sequence represents the feedback-resistant pyruvate carboxylase enzyme of the invention.

or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (III) encoded by them are used for diagnosing the presence or activity of Corynebacterium diphtheriae in a subject. (I), (II), (III) or host cells containing them are used to map genomes of organisms related to C. glutamicum, identify and localise C. glutamicum sequences of interest, in evolutionary studies, in determining SMP protein regions required for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ARAB73243 to AAB 19033 WHICH the AND TOWN TOWN TOWN TOWN THE C. glutamicum SMP gene can be used in vectors energy production. The C. glutamicum SMP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as, an organic acid, a proteinogenic production of fine chemicals, such as a proteinogenic production of fine chemicals, such as a proteinogenic production of fine chemicals, and the 
                                                                                  for function, in modulating SMP protein metabolism of sugars, and in modulating in a cell (i.e. ATP, NADPH).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   carbohydrates or enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated Corynebacterium glutamicum nucleic acid encoding a metabolism and oxidative phosphorylation protein for production modulation of production of fine chemicals e.g. amino acids,

```
CC energy production. The C glutamicum superior carbon metabolism and ccentry production. The C glutamicum swy gene can be used in vectors cc (II) for expression in host cells and production or modulation of cc production of fine chemicals, such as, an organic acid, a proteinogenic cc or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, cc a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty cc acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cc (III) encoded by them are used for diagnosing the presence or activity of containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms required cc in evolutionary studies, in determining SMP protein regions required cc for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production cc in a cell (i.e. ATP, NADPH).

                                                                                                                                                                                                                                                                                                                       This invention describes the isolation of a pyruvate carboxylase from Corynebacterium glutamicum which is used in a novel method for production of lysine, threonine, homoserine, glutamate and/or arginine, variously useful as feed additives, condiments, pharmaceuticals and intermediates for fine chemicals. Increasing pyruvate carboxylase activity increases the yield of microbial production of amino acids of the asparate and/or glutamate families, e.g. about 50% more lysine, of the asparate and/or glutamate families, e.g. about 50% more lysine,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Increasing increasing

                                                                                                                                                       1126
                                                                                                                                                                                                                                                                                                                                         sequences from the Coryneform bacterium Corynebacterium dilatamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.

                                                                                                                                                                                                                               analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a mutant protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                            Sequence

This invention describes novel isolated Streptococcus pneumoniae polynucleotides (see AAZ96173-Z96494) and their encoded proteins AAY85792-Y86182). The DNA, vectors and host cells described in the method of the invention are useful for the recombinant expression

the recombinant expression of the

(see

polypeptides

       The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            such a polypeptide. They can also be used to screen for compounds whice interact with and inhibit or activate such a polypeptide. The polypeptides (or DNA encoding them, via gene therapy) are also useful for inducing an immunological response in a mammal. The antagonists as useful to inhibit such bacterial polypeptides. The polypeptides are particularly useful to identify antimicrobial compounds and antibioted. They are also useful to determine their role in pathogenesis of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation is a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are CC Escherichia coll, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acids sequence is also useful to screen CC programmes. The antisense nucleic acid sequence represents an CC a wide variety of organisms. The present sequence represents an CC Note: The sequence data for this patent did not form part of the reinted generic data for this patent did not form part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 monocytogenes EGD-e (see ABAGGA41). The genome sequence and fragments of control of the related organisms, and for studying genetic monocytogenes and related organisms, and for studying genetic concorded by the genomes. The present sequence is a protein concorded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin control of the genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and concortogenes and related organisms.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO cat fits wipe, introluby miblished not sequences.

The prokaryotes used are CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen CC for homologous nucleic acids which are required for cell proliferation in CC a wide variety of organisms. The present sequence represents an CC use variety of organisms. The present sequence represents an CC in the printed specification, but was obtained in electronic CC format directly from WIPO at CC format directly from WIPO at

In the hybrid, a polypeptide of interest is fused to the C-terminus of the avidin-binding polypeptide. The hybrid polypeptide can then be recovered in a single chromatographic step

                                                                                                                                                                                                                                                                                                                                                                                                                                                     VISEMARE 2000
                                                                                                                                                     The present sequence represents a Treponema pallidum protein, which used to produce a fusion protein antigen for use in the method of the invention. The specification describes a method for detecting antibodies against Treponema pallidum. The antibodies are detected in a sample by reaction with a fusion protein antigen, present in the mixture in limiting concentration. The fusion protein antigen comprises a Treponema pallidum membrane antigen. The method is used for diagnosis of syphilis.
                                                                                                                                                                                                                                                                               Immunoassay for anti-Treponema pallidum antibodies, used for diagnosis of syphilis using a fusion protein of membrane antigen with peptide sequence that can be biotinylated in vivo -
                                                                                                                                                                                                                                                                                                                                         WPI;

                                                                                                                                                                                                                                                                             including humans. The OspC nucleotide sequence provides a superior diagnostic antigen that detects early Lyme disease infection, predicts successful eradication or the organism from the host, and discriminates between individuals with Lyme disease and individuals who have been vaccinated with an OspA Lyme disease vaccination. Detection of anti-Ospa borreliacidal antibodies advantageously gives an early diagnosis which anti-OspA and anti-OspA borreliacidal antibodies advantageously gives and carry diagnosis which canti-OspA and anti-OspA borreliacidal antibodies cannot do. Unlike vaccination with OspA, vaccination with OspC results in clearance of

                                     Immunoassay for anti-Treponema pallidum antibodies, used for diagno of syphilis using a fusion protein of membrane antigen with peptide sequence that can be biotinylated in vivo -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a Treponema pallidum fusion protein antigen. The protein is used in the method of the invention. The specification describes a method for detecting antibodies against Treponema pallidum. The antibodies are detected in a sample by reaction with a fusion protein antigen, present in the mixture in limiting concentration. The fusion protein antigen comprises a Treponema pallidum membrane antigen. The method is used for diagnon the protein protein pallidum membrane antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunoassay for anti-Treponema pallidum antibodies, used for diagnosis of syphilis using a fusion protein of membrane antigen with peptide sequence that can be biotinylated in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;

polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      in the method of the invention. The special form of detecting antibodies against Treponema pallidum. The antibodies are detected in a sample by reaction with a fusion protein antigen, present in the mixture in limiting concentration. The fusion protein antigen comprises a Treponema pallidum membrane antigen. The method used for diagnosis of syphilis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                   The present invention relates to the genomic sequence of Pyrococcus abyssi (see AARB6431 and AAH41223-7) and P. abyssi proteins. P. abyssi a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up 110 degrees centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                  The present invention relates to a new mutated, feedback-resistant pyruvate carboxylase enzyme. The invention is useful for producing an amino acid (e.g. L-Lys, L-Thr, L-Met, L-Ile, L-Glu, L-Arg and L-Pro), by culturing a host cell in a suitable media and separating the amino acid from the medium. The vector of the invention is useful for replacement of a wild-type pyruvate carboxylase gene, with a feedback
                                                                                                                     Novel mutated, feedback resistant pyruvate carboxylase enzyme polypeptide, useful for producing amino acids e.g. L-lysine, L-threonine, L-glycine, L-glutamic acid, L-proline and L-meth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a selectable marker gene through homologous recombination to form a first recombination strain, and replacing the selectable marker gene in the first recombinant strain, with feedback resistant pyruvate carboxylase gene through homologous recombination to form a second recombinant strain, where the homologous recombination in the above steps, occurs between the host cell and the vector. The feedback-resistant pyruvate carboxylase enzyme is resistant to feedback inhibition from asparitic acid. The present amino acid sequence represents the feedback-resistant
                                                                                             The sequence is that of a portion of the alpha subunit of Klebsiella pneumoniae oxalacetate decarboxylase. It is used as part of a fusion protein allowing for post-translation biotination which provides a marker for the fusion protein that can be used directly or indirectly to identify the fusion protein or to isolate it from a mixt. of other materials such as host cell culture media.

Genomic sequence for Listeria monocytogenes, useful and prevention of Listeria and related bacterial in related polypeptides infections,

Claim 6; SEQ ID No 317; 192pp; French.

B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by monocytogenes and related organisms.

Note: The sequence data for this patent did not form part of the prints specification, but was obtained in electronic format directly from WIPP at fire wipo.int/pub/published_pct_sequences. The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for blosynthesis and biodegradation, especially blosynthesis of Vitamin for blosynthesis and biodegradation, especially blosynthesis of Vitamin part of the printed directly from WIPO the genome by L. production of fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleoside, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (III) encoded by them are used for diagnosing the presence or activity of Corynebacterium diphtheriae in a subject. (I), (II) or host cells containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to in evolutionary studies, in determining SMP protein regions required for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a colity of a suppression of sugars, and in modulating high-energy molecule production in a colity of a suppression of sugars, and in modulating high-energy molecule production in a colity of a suppression of sugars, and in modulating high-energy molecule production in a colity of the suppression of sugars, and in modulating high-energy molecule production in the suppression of the suppression of sugars, and in modulating high-energy molecule production in the suppression of the suppression of suppression of the suppression of the suppression of the suppression of suppression of the suppression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Corynebacterium glutamicum nucleic acid encoding a metabolism and oxidative phosphorylation protein for production modulation of production of fine chemicals e.g. amino acids, carbohydrates or enzymes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 to AAB 79633 which are involved in carbon metabolism and

RESULT 13 AAB79299 Corynebacterium glutamicum SMP protein sequence SEQ ID NO:114. 30-APR-2001 AAB79299 standard; Protein; 272 (first entry)

Corynebacterium glutamicum; carbon metabolism and energy production; SMP protein; sugar metabolism and oxidative phosphorylation protein; fine chemical production; organic acid; proteinogenic amino acid; nonproteinogenic amino acid; purine base; pyrimidine base; nucleoside; nucleotide; lipid; saturated fatty acid; unsaturated fatty acid; diol; carbohydrate; aromatic compound; vitamin; cofactor; polyketide; enzyme diagnosis; Corynebacterium diphtheriae; evolutionary study.

Corynebacterium glutamicum.

                                                                                                                                                                                    acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (III) encoded by them are used for diagnosing the presence or activity of Corynebacterium diphtheriae in a subject. (I), (II), (II) or host cells containing them are used to map genomes of organisms related to C. glutamicum, identify and localise C. glutamicum sequences of interest, in evolutionary studies, in determining SMP protein regions required for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a cell (i.e. ATP, NADPH).
                                                                                                                                                                                                                                                                                                                                               metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrindidine base, and cleaning and a purine or production of the chemicals, such as, an organic acid, a production of the chemicals, such as, an organic acid, a production of the chemicals, such as, an organic acid, a production of the chemicals, such as, an organic acid, a production of the chemicals, such as, an organic acid, a production of the chemicals, such as, an organic acid, a production of the chemicals, such as a contract of the chemicals.
                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated Corynebacterium glutamicum nucleic acid encoding a metabolism and oxidative phosphorylation protein for production modulation of production of fine chemicals e.g. amino acids, carbohydrates or enzymes .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is provided in a specification relating to generating thermophilic amino acid biosynthesis system enzymes of the thermotolerant bacterium corynebacterium thermoaminogenes. The novel proteins retain at least 30% isocitrate ligase activity after heating at 50oC for 5 minutes. DNA fragments encoding the enzymes were isolated from a Corynebacterium thermoaminogenes chromosomal DNA plasmid library by PCR. The DNA may be used for developing strains of amino acid producing microorganisms.

Coryneform bacteriam are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention

                                                         US6171833-B1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a mutant protein described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nakagawa

glutamic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            amino acid (e.g. L-Lys L-Thr. L-Met, L-ILe, L-Glu, L-Arg and L-Pro), by culturing a host cell in a suitable media and separating the amino acid from the medium. The vector of the invention is useful for replacement of a wild-type pyruvate carboxylase gene, with a feedback resistant pyruvate carboxylase gene, in a Corynebacterium glutamicum, by replacing a genomic copy of the wild-type pyruvate carboxylase gene with a selectable marker gene through homologous recombination to form a first recombination strain, and replacing the selectable marker gene in the first recombination strain, with feedback resistant pyruvate carboxylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gene through homologous recombination to form a second recombinant strain, where the homologous recombination in the above steps, occurs between the host cell and the vector. The feedback-resistant pyruvate carboxylase enzyme is resistant to feedback inhibition from aspartic acid. The present amino acid sequence represents the wild-type feedback-resistant pyruvate carboxylase enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1131

By incorporating the pyruvate carboxylase gene in expression vectors levels of expression can be 2 - 20 fold higher than in Corynebacterium glutamicum.
                                                                                                                                                                                                                                                           Misc-difference
